

MANAGED SOC FOR OFFICE 365

Empowering MSPs to Deliver 24/7 SOC-as-a-Service to SMBs

Monitoring Microsoft 365

RocketCyber’s 24/7 Managed Security Operation Center (SOC) detects and responds to adversaries targeting your Microsoft 365 and Azure applications while helping you comply with regulatory mandates like PCI, HIPAA, SOC 2 and CMMC.

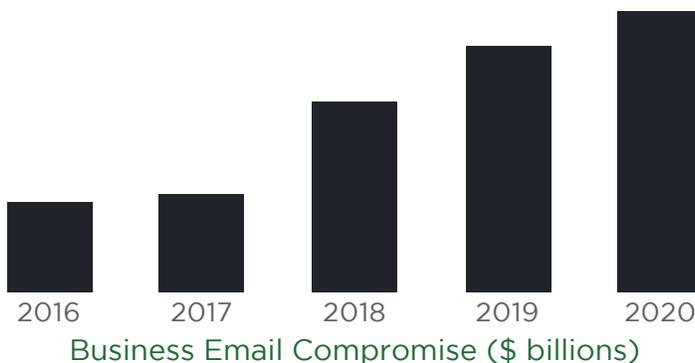

One of the largest blindspots in the industry is the lack of visibility into Microsoft 365 user threat data and to constantly have eyes monitoring it. RocketCyber, a SOC platform purposely built for the MSP industry, provides a multi-tenant cloud experience backed by seasoned security analysts hunting malicious and suspicious activity.

Unmonitored Microsoft 365 Users

Lack of monitoring cloud applications such as Microsoft 365 creates significant SMB security risks and privacy concerns that include:

- No visibility into unauthorized access and malicious plugins resulting in a data leakage
- Increased likelihood for data exfiltration resulting in a data breach
- Alert fatigue and frustration for MSPs with limited cyber security staff

The adoption of Azure cloud services and proliferation of Microsoft Office 365 usage combined with today’s remote workforce means that the latest emerging attacker techniques have a wider surface to compromise your business. Monitoring email user accounts are equally important as the traditional endpoint and firewall. In fact, many experts and industry analysts report that email is the number one unauthorized entry vehicle establishing a foothold on SMB networks today.

The FBI continues issuing warnings to the public over cloud-based business email compromises that now cost US business owners over \$2 billion.

Investigation to Security Incident PSA Ticketing

Security analysts from the RocketCyber SOC team are responsible for triaging Microsoft 365 events for all users spanning your fleet of SMB customers. This includes investigating each threat detected, then escalating the threat as a security incident ticket which is then submitted directly to your PSA ticketing system accompanied with remediation guidance.

- Unauthorized mail forwarding rules
- Unauthorized access
- Brute force logon activity
- Escalation of privileges to administrative groups

Benefits of the RocketCyber SOC for Microsoft 365

REDUCE DWELL TIME - Quickly determine if your business is already compromised or under attack. With proactive security monitoring and threat hunting, RocketCyber significantly improves detection and response time down to minutes to minimize disruption when an incident does occur.

REDUCE COST - The RocketCyber SOC delivers security monitoring with the power of the cloud and billed as a monthly subscription eliminating expensive capital expenditures eventually consumed by the small business owner.

SKILLS GAP - MSPs around the globe report having difficulty recruiting cyber security talent. Furthermore, staffing around-the-clock all year around is not practical. Partnering with a Managed SOC provider has proven to be more cost effective and eliminates the skill resource gap.

MULTI-TENANT SOC POWER - Investigating alerts and hunting for threats are time consuming. By partnering with the RocketCyber SOC, you get access to a multi-tenant cloud console, aggregating threat data providing insight across your fleet of customer's Microsoft 365 users, firewalls, endpoints and cloud applications back by a team of security veterans working 24/7/365.

Visit www.rocketcyber.com to start SOC-as-a-Service monitoring for your fleet of Microsoft 365 users and get answers in your PSA ticketing system to:

WHAT EMAIL ACCOUNTS ARE CURRENTLY COMPROMISED?

WHO IS THE RECIPIENT OF UNAUTHORIZED MAIL FORWARDING?

WHICH 365 SECURITY CONTROLS ARE LACKING?
